EDUCATION

B.Tech Computer Science & Engineering

Malabar Institute of Technology,
Anjarakandy

Kerala, India

2025 - Present

Data Structures · Algorithms · Web Technologies
· Computer Networks

SKILLS

LANGUAGES

- JavaScript
- Python
- C
- C++

FRONTEND

- HTML5
- CSS3
- React.js
- GSAP
- Three.js
- Spline 3D

BACKEND

- Node.js
- Express.js
- Electron.js
- Firebase

EMBEDDED / IOT

- ESP32
- Arduino
- BLE
- Wi-Fi
- I2S

AI / TOOLS

- Ollama
- STT/TTS
- Git
- VS Code

LANGUAGES

English — Professional Proficiency

Malayalam — Native

PERSONAL

- DOB: 07 December 2007
- Nationality: Indian

INTERESTS

- Embedded Hacking
- Open Source
- 3D Web Design
- Local AI

PROFESSIONAL SUMMARY

CS student and self-driven Software Engineer passionate about Web Development and Problem Solving. Skilled in JavaScript, Python, and C/C++, currently mastering React.js and deep-diving into ESP32 microcontrollers and embedded systems. Builds everything from immersive 3D web experiences and native desktop apps to edge-hardware AI assistants — combining full-stack web craft with low-level hardware hacking. Competed in and won college-level web development competitions, with active open-source contributions on GitHub.

DEVELOPMENT JOURNEY

- 2025
Present

Electron, ESP32 & Immersive 3D Experiences
Shipped a native Windows desktop app with Electron.js for local LLM interaction. Wrote ESP32 firmware (.ino) for a Bluetooth speaker and an AI assistant bridging edge hardware with Ollama. Built immersive landing pages with Spline 3D and fluid GSAP animations.
- 2024
2025

React, C++ & AI Integration
Adopted React.js for component-driven, scalable frontends and ventured into systems programming with C++. Explored AI-web integration, incorporating language models into projects. Began contributing to open-source repositories on GitHub.
- 2023
2024

JavaScript Mastery & Competition Wins
Built fully interactive JavaScript-powered web applications. Explored DOM manipulation, async programming, and REST API integrations. Won college-level web development competitions, validating skills built through relentless self-driven practice.
- 2022
2023

CS Foundations & First Steps into Web
Began Computer Science journey in Kerala — studied programming fundamentals, data structures, and problem solving. Crafted first static websites with HTML & CSS, building a strong visual and structural foundation.

PROJECTS

- Electron App for Ollama**

Desktop App

Custom Windows desktop application for running Ollama LLMs locally, featuring built-in Speech-to-Text and Text-to-Speech capabilities — bringing local AI models to life through a native desktop interface.

Electron.js

Node.js

Python

STT/TTS

github.com/prithvinvinod-git/Custom-Windows-App-for-ollama
- Red Bull Landing Page**

Web

Visually stunning brand landing page for Red Bull using Spline 3D, delivering an immersive experience that captures the brand's raw energy through interactive 3D elements.

- AI Assistant on ESP32**

Embedded / IoT

AI assistant on an ESP32 that serves a webpage powered by a local Ollama LLM running on a PC — bridging edge hardware with large language models over Wi-Fi.

Wi-Fi

HTTP

github.com/prithvinvinod-git/ESP32-OLLAMA-LOCAL-SERVER
- ESP32 Bluetooth Speaker**

Embedded / IoT

Full BLE audio pipeline on an ESP32 — receives audio over Bluetooth, processes it, and drives a speaker via I2S output.

ACHIEVEMENTS

- ▶ Won college-level Web Development Competition — self-driven, validating skills built through relentless practice.
- ▶ Active open-source contributor on GitHub with multiple hardware + web projects.
- ▶ Built and deployed a full local-AI pipeline bridging ESP32 edge hardware with Ollama LLMs.
